

Experiment No. 1

Title: Website building and hosting it.

Batch: B-1

Roll No.: 16010422234

Experiment No.: 1

Aim: Build a website and host it.

Resources needed: Web development framework, hosting domain

Theory:

1. Develop a website having minimum 4 to 5 linked web pages.
2. Host it on any domain.

Results: (Screenshots of hosting steps and web pages)

Questions:

1. Explain any two digital marketing channels.

a) Social Media Marketing (SMM):

Social media marketing involves promoting products or services through social media platforms such as Facebook, Instagram, Twitter, LinkedIn, etc. By creating engaging content and running targeted advertisements, businesses can interact directly with their audience and drive traffic to their website. Social media also allows for real-time feedback and customer interaction, making it an essential channel for building brand awareness and customer loyalty.

b) Search Engine Optimization (SEO):

SEO is the practice of optimizing a website's content, structure, and technical aspects to rank higher in search engine results pages (SERPs). By focusing on keyword research, on-page optimization (e.g., meta tags, headings, content quality), and off-page strategies (e.g., backlinks), businesses can increase their visibility and organic traffic. A strong SEO strategy leads to improved website rankings, better user experience, and higher conversion rates.

Outcomes: CO2 – Understanding search engine optimization essentials

Conclusion: (Conclusion to be based on the objectives and outcomes achieved)

The experiment focused on developing a website with multiple linked pages and hosting it on a domain, which provided hands-on experience in both web development and hosting. This exercise demonstrated the importance of understanding the technical aspects of website creation and the deployment process. Additionally, learning about digital marketing channels highlighted the strategic approaches required to promote websites and attract traffic. The outcomes achieved from this exercise meet the course objectives, specifically in understanding the digital marketing paradigm and its real-world applications for web-based platforms.
