

Experiment No. 2

Title: Google analytics set up for website.

Batch: B-1

Roll No.: 16010422234

Experiment No.: 2

Aim: Setting up Google Analytics for Website

Resources needed: Internet and MS-office

Theory:

GOOGLE ANALYTICS

Knowing your audience and what they want is an important success factor for any website. The best way to know your audience is through your traffic stats and this is exactly what Google Analytics does. Google Analytics is one of the top, most powerful tools out there for monitoring and analysing traffic on your website. For using analytics one should create the account and then need to copy the tracking code. Once you add the tracking code to your webpages, Google analytics will track the various activities on the website and will generate the reports for it.

Learning Extension Resources:

<https://www.youtube.com/watch?v=ZXSI5R7GeVA> (Timestamp 0-2.58)

Procedure:

1. Create an account for Google Analytics.
 2. Add basic page tracking to the website by copying the code snippet.
-

Results: (Stepwise procedure (with snapshots) for above question)

The screenshot displays the Google Analytics website in a browser window. The address bar shows the URL `analytics.google.com/analytics/web/provision/#/provision`. The page features the Google Analytics logo and a large heading "Welcome to Google Analytics". Below the heading, a message states: "Google Analytics gives you the free tools you need to analyze data for your business in one place, so you can make smarter decisions." A blue button labeled "Start measuring" is prominently displayed.

The "Complete information" section explains the purpose of Google Analytics: "Understand your site and app users to better check the performance of your marketing, content, products, and more." To the right, there is an illustration of a laptop and a bar chart.

The footer of the main content area includes copyright information: "© 2025 Google | [Analytics home](#) | [Terms of Service](#) | [Privacy Policy](#) | [Send feedback](#)".

Below the main content, a secondary section titled "Create an account" is visible. It includes a progress bar with five steps: 1. Account creation, 2. Property creation, 3. Business details, 4. Business objectives, and 5. Data collection. The "Account details" section is currently active, showing a form for "Account name (Required)" with the value "chandanagajali" entered. Below this, there are sections for "Account Data Sharing Settings" with checkboxes for "Google products & services", "Modeling contributions & business insights", "Technical support", and "Recommendations for your business". A "Next" button is located at the bottom left of the form.

On the right side of the bottom section, there is a watermark that says "Activate Windows Go to Settings to activate Windows."

Data collection

Choose your business objectives

To get recommendations personalized for your business, select the objective most relevant to you. You can select more than one objective, but a maximum of two is recommended.

**Generate leads** ⓘ
Measure actions that indicate potential customers, such as completing contact form or requesting a quote ☒

**Drive sales**
Analyze and optimize sales and any financial transactions on your website or app ☒

**Understand web and/or app traffic**
Measure your website or app visitors and the channels that drive their visits ☒

**View user engagement & retention**
Learn how people explore the products or services on your website or app ☒

**Other business objectives**
If your business is in a category not listed above ☐

Data collection

Start collecting data

To set up data collection for your website or app, choose from where you will be collecting data (the Web, an Android app, or an iOS app). Next, you'll get instructions for adding a data collection tag to that source.

Set up a Google tag

Test installation

Choose how to set up a Google tag

Install manually RECOMMENDED

Below is the Google tag for this account. Copy and paste it in the code of every page of your website, immediately after the <head> element. Don't add more than one Google tag to each page.

```
<!-- Google tag (gtag.js) -->
<script async src="https://www.googletagmanager.com/gtag/js?id=G-8JVS5R5RPL"></script>
<script>
  window.dataLayer = window.dataLayer || [];
  function gtag(){dataLayer.push(arguments);}
  gtag('js', new Date());

  gtag('config', 'G-8JVS5R5RPL');
</script>
```

Use Google Tag Manager?

For additional features including multiple tag management and enterprise workflows, install and manage with Google Tag Manager. [Learn more about Google Tag Manager](#)

If you have end users in the European Economic Area (EEA), set up consent mode so that you can continue to benefit from ads personalization and measurement.

Outcomes: CO2 – Understanding search engine optimization essentials

Conclusion: (Conclusion to be based on the objectives and outcomes achieved)

The integration of Google Analytics into a website is a crucial step in understanding user behavior and improving the digital marketing strategy. By setting up Google Analytics and adding the tracking code, we gain valuable insights into user engagement, traffic sources, and conversion metrics. These insights allow businesses and website owners to make data-driven decisions that optimize content, user experience, and overall marketing efforts. In essence, Google Analytics empowers businesses to enhance their online presence by providing a clear picture of audience activity and website performance. Through this experiment, we comprehended the shift in marketing strategies towards a more data-driven and analytical approach, highlighting the significance of tools like Google Analytics in modern digital marketing.
