

Dim unit 2

Dipti Pawade

- *Web analytics* is the art of using traffic and sales statistics to understand user behavior and improve the performance of your site.
- In the best of all possible worlds, analytics is part of a continuous spiral of feedback and quality improvement.

Tracking Web Site Activity

- The basic principle “You can’t manage what you don’t measure” applies doubly to Web sites. You must know whether your site is losing or gaining traffic; whether visitors boogie away after less than a minute; or whether anyone is bothering to call, e-mail, or buy.
- Otherwise, you don’t have a clue what problem you need to solve, let alone how to solve it.

Table 14-1 **Information Resources for Web Analytics**

<i>Name</i>	<i>URL</i>	<i>What You'll Find</i>
Google Analytics	www.google.com/support/conversion/university/?hl=en	Google Analytics-specific resources
Omniure	www.omniure.com/en/resources/guides	Guides and case studies on analytics
Web Analytics Association	www.webanalyticsassociation.org/index.asp	Resources, events
WebAnalytics Demystified	www.webanalyticsdemystified.com/research/index.asp	Resources, links, worksheets
WebTrends	www.webtrends.com/resources.aspx	Resources

Identifying What Parameters to Measure

- KPI
- KPI differs slightly for each business and Web site.
- A lead generation site and retail site both care about the most important statistic of all: *conversion rate*. However, requests for quote might be a KPI for a B2B lead generation site.
- For a retailer, number and average value per sale are more important. Because you calculate conversion rate, you must decide what's essential to measure.

Which statistics to fret over

- **Visits**
- **Unique Visitor**
- **Page View**
- **Page view per visit**
- **URL viewed**
- **Referrers**
- **Search Engine**
- **Conversion Rate**

Which statistics to scan casually

- **Time of day**
- **Day of the week**
- **Browser**
- **Length of visit**
- **Search String**
- **Hosts or sites**
- **Countries**
- **Entry Page**
- **Exit Page?**
